SUMMARY

Sevia Dwi Yanti is a fresh graduate in Software Engineering Technology from the Bogor Agricultural Institute with a strong interest in mobile application development. Proficient in Kotlin and Flutter, with a focus on writing clean, well-structured, and maintainable code. Passionate about creating user-friendly applications and continuously developing the ability to integrate technology, design, and real-world user needs.

EXPERIENCE

Mobile Apps Developer - Maritim Muda Nusantara

Des 2025 – Now

Program MagangHub Kementerian Ketenagakerjaan RI

An organization focused on developing digital solutions in the maritime sector to enhance connectivity, operational efficiency, and user experience.

- Improved performance, stability, and user experience of *Maritim Muda Connect* by identifying and resolving application bugs.
- Managed end-to-end mobile deployment, including build configuration, code signing, and publishing to Play Store and App Store.
- Developed mobile applications using Flutter, applying GetX for *Maritim Muda Connect* and Cubit (BLoC) for a gym tracking app, implementing core features such as UI, business logic, and API integration.

Fullstack Web Developer – PT. Anugrah Eka Gemilang

Jul – Des 2024

A company engaged in digital solution development, focusing on building web-based systems to support business operations and improve efficiency.

- Developed STP Job Portal based on business requirements, improving efficiency in job posting and applicant management.
- Built responsive UI using Tailwind CSS and developed backend features with Laravel, ensuring seamless user experience across devices.
- Integrated frontend and backend systems, including authentication and data handling, enhancing system reliability and data accuracy

UI/UX Developer – PT. Amerta Indah Otsuka

Jan - Jul 2025

A company engaged in the consumer goods industry, focusing on the production and distribution of health and beverage products in Indonesia.

- Designed intuitive UI/UX for internal applications, improving user satisfaction and ease of use.
- Developed frontend using Angular and built backend services with Express, supporting dynamic and scalable application features.
- Created wireframes and high-fidelity designs aligned with design standards, accelerating development process and reducing revisions.

System Analyst – PT. Simex Pharmaceutical Indonesia

Aug - Nov 2025

A pharmaceutical company engaged in the development, production, and distribution of medical and healthcare products in Indonesia.

- Gathered and analyzed system requirements through user research and observation, ensuring alignment with business needs.
- Created system documentation, including UML diagrams and ERD, improving development clarity and reducing miscommunication.
- Supported system testing and validation, ensuring system reliability and readiness for deployment.

EDUCATION

IPB University

Aug 2021 – Aug 2025

Software Engineering Technology (IPK: 3,74)

I am very interested in courses related to object-oriented programming, data structures, algorithm design and analysis, programming algorithms, and mobile development.

Bangkit Academy by Google, GoTo, Traveloka

Feb – Jul 2024

Mobile Developer Student

- Learned mobile app development using the Kotlin language, from beginner to intermediate level.
- Completed milestone-based mobile app projects, consistently meeting deadlines and quality standards.
- Built an Android application as part of a team capstone project, incorporating API integration and clean architecture
- Courses taken: Belajar Membuat Aplikasi Android untuk Pemula, Belajar Fundamental Aplikasi Android, Belajar Prinsip Pemrograman SOLID, Memulai Pemrograman dengan Kotlin, Belajar Pengembangan Aplikasi Android Intermediate, Belajar Penerapan Machine Learning untuk Android

PROJECT

Gym Tracking

- Developed a mobile application using Flutter with Cubit (BLoC) for scalable state management
- Designed a user-friendly interface for tracking workouts and fitness activities, enhancing usability and user engagement
- Implemented activity logging and progress tracking features to help users monitor fitness performance effectively

WearShare – Capstone Project

- Developed a mobile application using Kotlin for sharing and donating pre-loved clothes.
- Implemented authentication, item listing, and donation workflow to streamline the donation process
- Integrated ML-based image classification for item validation, improving accuracy in item verification.

ORGANIZATIONAL EXPERIENCE

Himavo Micro IT Community – Multimedia

2021 – 2023

A student community focused on developing skills and creativity in multimedia, as well as supporting various technology-based events and programs within the organization.

- Participated in multimedia training sessions to enhance skills in design, editing, and digital content production.
- Contributed to the execution of organizational programs such as IT Fest, MTE, and Upgrading by creating supporting visual and multimedia materials.
- Assisted in producing promotional and event-related content to improve engagement and event visibility within the organization.

SKILLS

Certifications: Bangkit Academy Completion Certificate, TBI English Certificate

HardSkills: Flutter, Kotlin, MySQL, MongoDB, Laravel, Node.js, Express, Angular

Soft skills: Team Work, Time Management, Adaptability, Communication

Interest: Mobile Developer, Front-end Developer, Software Engineering
